EDUCATION

University of Toronto

Sep. 2020 – May 2025

Bachelor of Applied Science in Computer Engineering, Minor in Business

Toronto, ON

- Courses: Distributed Systems, Computer Networks, Operating Systems, Relational Databases

EXPERIENCE

Software Engineer Intern

May 2023 – May 2024

Intel

San Jose, CA

- Simulating performance for next-gen **FPGAs** with hardware and workload modeling using **Platform Architect** to assist **architecture design**
- Streamlining from data collection to aggregation using **Tcl/Python/NumPy** reducing manual data analysis by 90% and expediting agile silicon design iterations
- Introduce modular **TLM model** with **SystemC** for FPGA subsystem used by 100+ engineers using Tcl, reducing development time by 20% by eliminating the need for modeling each subcomponent separately
- Providing insights to architecture and validation teams by presenting collected data, identifying potential bottleneck components to optimize **data latency and throughput**

Software Engineer Intern

May 2022 – Sep 2022

Google Summer of Code – OpenStreetMap

Remote

- Building **transit routing** for Valhalla Routing Engine, allowing **OpenStreetMap** users to travel by public transit, removing 3rd party API dependencies and bottlenecks
- Streamlining transformation of raw GTFS transit data into **tiled hierarchical graphs in C++** to optimize resource consumption when routing, only processing data along given routes
- Optimizing runtime cost by introducing caching of transit data and implementing prioritization when multi-threading
- Ensuring the transit layer is connected to the rest of the map allowing for multimodal routing, by testing for proper graph creation and connection

Founder at Shareable

May 2021 – Sep 2021

UofT Entrepreneurship Hatchery

Remote

- Founded a startup building an online learning platform for discovering high-quality live hobby courses with curated experiences from industry experts
- Optimizing the product's value with hands-on market research, interviewing a dozen experts on hobby teaching
- Bi-weekly iterations of pitching business plans to mentors, startup CEOs, and investors for product viability
- **\$3500** individual fellowship awarded to further pursue the business

PROJECTS

City Mapper

Jan. 2022 – May 2022

- Developed a **GTK Application** that accesses the OpenStreetMap API using **C++** to draw maps of cities that can search for streets and shops
- Implemented **A* algorithm** for finding the optimal path between multiple intersections with **GUI integration** for input through search and mouse clicks

Java Distributed System

- Constructed a **multi-threaded distributed key-value store** in Java with consensus algorithms, failure detection, and fault tolerance in a team of 3
- Implemented heartbeat failure detection for servers with **Lamport leader election algorithm** and replication-based recovery

TECHNICAL SKILLS

Certificates: AWS Certified Solutions Architect – Associate

Languages: Python, C/C++, Java, Tcl, SystemC, SQL (Postgres), Verilog, HTML/CSS

Frameworks and Tools: React, Node.js, Flask, MongoDB, Git, Docker, Linux

Libraries: Pandas, NumPy, C++ standard Library
